CAREER OBJECTIVE

MERN Stack Developer and Computer Science & Engineering student who has designed, built and deployed three full-stack web apps on my own with Next.js, React, Node.js, Express and MongoDB. Seeking a junior full-stack developer role where I can turn requirements into secure, reliable features, solve problems methodically and grow with a collaborative engineering team.

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), TypeScript, React, Next.js (App Router), HTML5, CSS3, Tailwind CSS, shadcn/ui, DaisyUI
Backend: Node.js, Express.js, REST APIs, Better Auth, JWT, Zod
Databases: MongoDB; familiar with MySQL, PostgreSQL
Tools & Deployment: Git, GitHub, Vercel, Netlify, VS Code, Figma
Other: Python, OpenCV, YOLOv8, ESP32/Arduino, C, C++, Odoo; currently learning C# and ASP.NET
Soft Skills: Problem Solving, Debugging, Composure Under Pressure, Patience, Dedication, Self-Directed Learning

PROJECTS

StudioSpace — Creative Studio Booking Marketplace Live Site | GitHub (Client) | GitHub (Server)
Technologies: Next.js, TypeScript, Tailwind CSS, shadcn/ui, Express.js, Better Auth, JWT, Recharts, jsPDF

- Built an hourly booking flow with calendar availability and a live price breakdown; confirming a slot automatically declines overlapping requests to prevent double bookings.
- Secured private routes with server-side checks and a JWT in an HTTPOnly cookie, routing API calls through Next.js rewrites to keep cookies first-party.
- Delivered a host dashboard with an earnings chart, a booking-request inbox and downloadable PDF invoices.

Bazardor — Bengali Daily Market-Price Tracker Live Site | GitHub (Client)
Technologies: Next.js, TypeScript, MongoDB, Better Auth, Zod, Tailwind CSS, DaisyUI

- Shows daily product prices with an infinite-scrolling ticker of top risers and fallers, plus category filters and price sorting.
- Fetches prices on the server with timeouts, a fallback API and 60-second revalidation, and validates every response with Zod so bad data cannot break the UI.
- Implemented email/password, Google and GitHub sign-in with Better Auth and MongoDB to protect market-level price details.

FitLog — Workout Library & Daily Planner Live Site | GitHub (Client)
Technologies: Next.js, React, TypeScript, Tailwind CSS, DaisyUI, React Context API

- Lets users search workouts by name, tag or equipment, sort them by duration, calories or rating, and open detailed exercise pages.
- Built a five-workout daily plan with duplicate protection and toast feedback, shared across pages through React Context.
- Persisted plans and saved workouts in localStorage and restored them on reload without hydration flicker.

EDUCATION

B.Sc. in Computer Science & Engineering **2024 – 2027 (Expected)**
International University of Business Agriculture and Technology (IUBAT), Dhaka, Bangladesh

- Course projects: IoT Fruit Detection System (ESP32-CAM, Python, OpenCV, YOLOv8) and a School Management System module (Odoo 18)

LANGUAGES

Bangla (Native) | English (Professional working proficiency)
